Underlying Cause of Death, W54 (Bitten or struck by dog), CDC Wonder database - 2005; 2006; 2007; 2008; 2009; 2010; 2011; 2012; 2013; 2014; 2015; 2016; 2017; 2018; 2019. Accessed May 8, 2021 (wonder.cdc.gov)

NOTES:
Despite total death counts being nearly exact, CDC Wonder data shows more adults ≥ 50 years old killed by dogs (+88) and fewer children ≤ 9 years old (-73) killed by dogs than DogsBite.org data. The adult cases, ≥ 50 years old, may involve a number of family dog attacks that never reach the media. There may be a number of "struck by dog" deaths in the older categories, as well, that our nonprofit already excludes from our statistics. CDC data (ICD-10 code W54) does not separate out "bitten by dog" and "struck by dog" deaths. It is a combined category. DogsBite.org collects information on "vicious dog attacks," where the bite injuries are so severe, the death of an individual results shortly thereafter or in outlier cases, within months, if that person showed "failure to thrive" after the dog mauling and died in a hospice or home setting.
