### Summary and Discussion

In a 6-month period (January to June 2009), 318 media reported pit bull attacks were recorded. 388 victims sustained bite injuries in these attacks and each incident produced just over one bite victim (1.2 per incident). Of the injured victims, 64% (248) suffered severe bite injury<sup>[1]</sup> and 36% (140) suffered minor bite injury. Of the severely injured victims, 4% (10) suffered the loss of one or more body parts totaling 16 severed parts. 2% (6) of these victims suffered death by a fatal pit bull mauling.<sup>[2]</sup>

The 21-54 age group suffered the most pit bull bites 42% (163), followed by the 5-11 group with 24% (94) and the 12-20 group with 13% (51). The combination of two groups (0-4 and 5-11) with 36% still incurred fewer bites than the 21-54 group. Yet the combined 0-11 group suffered a higher percentage of severe injury, 72%, than the 21-54 group, which suffered 60%. The group that incurred the highest rate of severe injury

by pit bulls was 0-4 with 84% followed by 5-11 with 66%.

Property information was available in 310 incidents. The data shows that 68% (212) of the pit bull bites occurred off owner property and 32% (98) occurred on owner property. This is a reversal of non-breed specific dog bite data, which consistently reports that up to 70%<sup>[3]</sup> of bites occur on the dog owner's property. As documented in this 6-month report, as well as the DogsBite.org 3-year fatality study, pit bulls escape owner property and inflict bites at a substantially higher rate than other dog breeds.

States with the highest number of pit bull attack victims included: Texas (38), Florida (34), Ohio (21), Pennsylvania and Virginia (each with 18) and New York (16). Counties with the highest number of victims included: Allegheny, PA (8), Essex, MA and Dallas, TX (each with 7) and Cook, IL, Marion, IN, Clark, NV and Salt Lake, UT (each with 6).

### Age Group % Victims

Ages 0-4	12%
Ages 5-11	24%
Ages 12-20	13%
Ages 21-54	42%
55 (and >)	9%

### Age Group % Severe

Ages 0-4	84%
Ages 5-11	66%
Ages 0-11	72% Combined
Ages 12-20	57%
Ages 21-54	60%
55 (and >)	63%

"% Severe" equals the percentage of severe injury victims within age group.

Note: The Mid Year Results are preliminary and may be subject to revision at the end of 2009 when the final 12-month report is complete.
